**Subject:** Minntac GW SRP

Chrissy, Tom:

With the two most recent sets of sulfate monitoring results from GW013 on the north side of the tailings basin, (5/29/14 – 297 mg/l and 7/30/14 – 308 mg/l), I would like you to review your approved GW SRP and submit any revisions to ensure it addresses this “new” location.

Parts of the Plan that appear to need revision include:

Part 4 (Additional Data Needs) and Part 6 (Schedule) – in particular the time to come to compliance at GW013.

Please review the Plan and indicate a date by which you will submit a revised Plan.

Please call if you want to discuss further.

Thank You.
